João Vitor Queiroz de Campos Pires

Software Engineer | Full Stack Developer | React · Laravel · Node.js · Scalable APIs · Clean Architecture · Agile

jvpcoder@gmail.com | +55 13 99653-8438 | linkedin.com/in/jvpcoder | Curitiba, Brazil — Open to Remote & Relocation

Professional Summary

Experienced Software Engineer specializing in scalable web applications, backend architecture, and intelligent automation systems. Skilled in Clean Architecture, RESTful API design, CI/CD pipelines, and Agile delivery.

Designed and optimized business-critical checkout workflows using React, Laravel, and Node.js — improving system stability by 30% and reducing average API response time by ~1 second through clean architecture and optimized query logic.

Led automation initiatives integrating OpenAI API and WhatsApp Business API, achieving 94% lead handling success rate and reducing manual overhead by 40% across teams.

Seeking international opportunities to contribute to AI-driven product development and architecture decisions within high-performance Agile engineering teams.

Technical Skills

Front-End: React · Next.js · TypeScript · JavaScript · Vue.js · Angular · HTML5 · CSS3
Back-End: PHP (Laravel) · Node.js · Java (Spring Boot) · Python
Databases: MySQL · PostgreSQL · MongoDB · Supabase
DevOps & Tools: Docker · Docker Compose · Git · GitLab · GitHub · CI/CD · REST APIs · n8n
AI & Automation: OpenAI API · Conversational AI · CRM Automation · WhatsApp Business API
Practices: Clean Architecture · DDD · Microservices · Agile/Scrum · Code Review · TDD

Professional Experience

Software Engineer · Fábrica do Livro *07/2025 – Present*

Curitiba, BR · Remote

- Developed and maintained full-stack React and Laravel applications, improving performance by 30% through clean architecture and optimized database queries.
- Sole engineer who diagnosed and resolved a critical repurchase flow bug, fully restoring purchase continuity and preventing ongoing revenue loss for the business.
- Designed RESTful APIs and service-layer abstractions following Clean Architecture principles, improving modularity and reducing coupling across legacy PHP components.
- Optimized backend validation and database queries, reducing average API response time by ~1 second; built fully dynamic, reusable query logic across order processing services.
- Collaborated in Agile/Scrum environment using GitHub-based workflows with structured code review and CI/CD practices.

IT Consultant · Portal Dez Seguros & Imóveis *01/2025 – 02/2025*

Hybrid

- Designed and implemented WhatsApp automation workflows using the Official WhatsApp API and Kommo CRM, achieving a 94% lead handling success rate and 20% conversion rate across ~30 daily customer interactions.

- Built conversational bots with structured lead segmentation logic — cutting average response time from ~15 minutes to near real-time and eliminating dependency on manual agent triage.
- Integrated CRM, REST APIs and SQL pipelines using JavaScript to centralize customer interaction data and enable data-driven sales decisions.

Automation Engineer · ESC Automações Digitais *11/2024 – 01/2025*

Hybrid

- Built WhatsApp automation flows using n8n and REST APIs, integrating OpenAI models for intelligent automated responses, reducing manual overhead by 40%.
- Sole developer of an end-to-end CRM and WhatsApp message manager prototype — owned all architecture and implementation decisions, fully automating lead qualification and consolidating the company's automation product offering.
- Implemented API integrations and JSON-based data handling to connect external services with internal dashboards.

Software Engineer · Flize Tecnologia *07/2024 – 10/2024*

Remote

- Delivered 3 complete, pixel-perfect responsive websites within the engagement period, converting Figma designs into mobile-optimized applications using React, Next.js, PHP and MongoDB.
- Managed containerized development environments using Docker and Docker Compose, ensuring consistent local and production parity.
- Contributed to version-controlled collaborative workflows using GitLab, following structured branching and code review practices.

Key Projects

CRM & WhatsApp Automation Platform

End-to-end automation system integrating WhatsApp Business API, OpenAI models and Kommo CRM. Achieved 94% lead handling rate, 20% conversion rate and reduced response time from 15 min to near real-time. Stack: Node.js, n8n, REST APIs, SQL.

E-commerce Checkout Refactor

Full refactor of critical checkout and repurchase workflows for a production e-commerce platform. Resolved a complete purchase flow failure, improved API response time by ~1 second, and introduced reusable query architecture. Stack: React, Laravel, PHP, MySQL.

Responsive Web Application Suite

Delivered 3 fully responsive, pixel-perfect web applications from Figma specs, each with containerized environments and CI/CD-ready pipelines. Stack: React, Next.js, PHP, MongoDB, Docker.

Education

B.Sc. Systems Analysis and Development *12/2025*

Universidade Tecnológica Federal do Paraná (UTFPR)

Languages

Portuguese: Native **English:** Fluent C2 — EF SET 71/100 (2026)

Certifications & Development

JavaScript Advanced — DevSamurai, 2023

Object-Oriented Programming in Java — DIO, 2023

Cybersecurity Specialist Formation — DIO, 2024
Bootcamp Front-End with Angular — DIO, 2024
Bootcamp Back-End Java — 7th place ranking — DIO, 2023
Bootcamp Santander CyberSecurity — DIO, 2024

Additional Information

Open to global relocation and remote opportunities.
